

IN THE CLAIMS

CLEAN (UNMARKED) COPY OF AMENDED CLAIMS

Please amend the following Claim as shown below:

sub-b17
A1

1. (Amended) A method for a local computer system to control a remote system over the Internet, comprising the steps of:

- initiating a log-in procedure by the local computer system;
- verifying whether a user is authorized to access the remote system;
- accepting a command from an authorized user by the local computer system;
- executing the command through File Transfer Protocol to perform a function on the remote system; and
- issuing a single script from the local computer system to command the remote system and to download data from the remote system, wherein the data downloaded from the remote system comprises a software program.

sub-b37
A2

15. (Amended) A server computer comprising:

- an IP port which accepts FTP commands from a client computer system;
- a processor coupled to the processor which executes the FTP commands;
- a first memory coupled to the processor which contains a file system; and
- a first memory coupled to the processor for storing an operating system, wherein the remote user issuing the FTP commands from the client computer can administer the file system, wherein the IP port accepts a single script from the client computer system which causes the server computer to download a computer program from the server computer to the client computer system.

25. (Amended) A computer-readable medium having stored thereon instructions for implementing a remote computer systems management through an FTP Internet connection, comprising the steps of:

initiating a log-in procedure by the local computer system;

verifying whether a user is authorized to access the remote system;

accepting a command from an authorized user by the local computer system;

executing the command through File Transfer Protocol to perform a function on the remote system; and

issuing a single script from the local computer system to command the remote system and to download data from the remote system, wherein the data downloaded from the remote system comprises a software program.
